Hosting of the European delegation of Extratex

The European Extratex delegation, bringing together clusters from three countries (Italy, Spain, Czech Republic), was hosted in May by Techtera and Polymeris, its counterpart in plastics and composites. The aim was to present, not only the good management practices of these “innovation clusters”, but also to propose B2B meetings, with a view to contacts between regional and foreign organisations for future cooperation.

There were also visits to TechteraFab and several members (IFTH, Axel’One, CTTN and Jet Metal).

Focus

Techtera is a partner of the MC4 project (recycling and circular processes for composites)

Since April 2022, Techtera has been a partner in the European project: “Multi-level Circular Process Chain for Carbon and Glass Fibre Composites”. MC4 will establish circular procedures for carbon and glass fibre composites.

The project will develop efficient and economically-realistic processes, adapted to the specificities of the two value chains. It will give European industry the means to control and implement its patented processes for manufacturing recycled materials.

Our Services

Two exploratory and commercial missions to the United States

As part of the European projects [EU-ALLIANCE](#) and [REC-N-COMP](#), Techtera offers European companies the opportunity to participate in two exploratory missions to the United States.

The programme consists of visits to events and companies, as well as meetings to promote developments with the other side of the Atlantic.

EU-ALLIANCE: Security and defence trade mission from October 10 to 14, 2022 in Washington, on the sidelines of the AUSA convention (Association of the United States Army).

This is the largest land-defence event in North America, which brings together 700 exhibitors and contractors. Visitors also have access to numerous conferences allowing them to better understand the challenges and opportunities concerning the American defence market.

This mission will also be an opportunity to discover the State of Maryland; a very rich and active ecosystem in the defence and security sectors.

REC-N-COMP: Exploratory mission concerning sustainable composites from October 17 to 21, 2022 in California on the sidelines of the CAMX tradeshow.

The project will develop efficient and economically-realistic processes, adapted to the specificities of the two value chains. It will give European industry the means to control and implement its patented processes for manufacturing recycled materials.

Are you interested in these markets and countries? Do not hesitate to contact us for more information:

MARDUEL & Fils: New ISO 9001 certification

MARDUEL manufactures and develops technical yarns by assembly-twisting for industrial applications.

To support its development in the industrial and aeronautical markets, MARDUEL has obtained ISO 9001:2015 certification. This is a great recognition of the company's organisation, which is more than a century old but totally committed to the present

epoch. Flexibility, Traceability, Repeatability, also Listening and Providing customer service, are the key words that drive the whole team.

Monaco Fire and Emergency Service, in partnership with SULITEC, have designed a security box for electric vehicles

A treatment unit for alternative energy vehicles was installed last May at the Fontvieille Rescue Centre.

Developed by the Monaco Fire and Emergency Service in partnership with the SULITEC Group, this box, designed on the

basis of a maritime container, responds to the operational concept, which can be summed up as: "Isolate – Check – Treat".

This box, unique in the world, instrumented and intelligent, is insulated to withstand temperatures going up to 1,100°C.

Its commissioning meets the need to bear in mind the risks associated with the development of alternative energy vehicles in the Principality, which represent 12% of the vehicle fleet registered to date. It will contribute to maintaining a high level of security while promoting the energy transition.

A seventh clothing workshop in France for Marck & Balsan

Last May, Marck & Balsan announced the takeover of France Manufacture, based in Limoges. This workshop makes suits and clothing for men, made-to-measure and in series. Also, using its skills and craftsmanship, it makes high-end, luxury ladies' clothing.

With this acquisition, Marck & Balsan has several objectives:

- Increase its production capacity in response to the growth of its markets
- Diversify its offer and reach new markets in the luxury industry
- Add to its skills and know-how, thanks to the thirteen current employees, who will keep their jobs
- Continue to develop its production in France with this seventh workshop in French regions.

This acquisition fits perfectly with the Marck & Balsan strategy, which aims to increase its ability to meet the demands of its customers, to seize development opportunities and perpetuate its commitment to maintaining jobs and “Made in France know-how”.
